DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Drake et al.(U.S. Patent No. 6,594,057).

Regarding claim 1, Drake discloses a support structure(fig 1, 401), a membrane structure separated from the support structure by an electrostatic cavity (fig 1, 420), a tab on the membrane structure that increases a rigidity of the membrane structure to deflection after a predetermined amount of deflection(fig 1, 50 and col 6, lines 1-15).

Regarding claim 6, Drake discloses the base of the tab (fig 1, 50) is connected to the membrane structure(fig 1, 420, additionally fig 1 shows the "tab" is connected to the membrane structure).

Allowable Subject Matter

Claims 2-5, 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. With the patentable features being; the tab has a cantilevered portion that engages the membrane structure after deflection(claim

2); the membrane structure additionally includes a tethered structure(claim 3); the tab extends radially on the membrane structure(claim 7).

Conclusion

The art made of record and not relied upon is considered pertinent to applicant's disclosure. Shim(U.S. Pat. Pub 2002/0149071) and Knipe et al.(U.S. Patent No. 5,739,941) are pertinent to the application since they pertain to a MEMS device with a non linear restoring unit.
